

A vulnerability and solutions survey...

Vigil@nce informs you about vulnerabilities related to your network, and their solutions.

This technological survey comprises four key aspects:

Detailed information (vulnerabilities and solutions) are available on a web server.

Email messages, daily or punctual, are sent depending on information gravity.

Users and perimeters (product or computer lists) are defined.

Solutions are planed and an **agenda** indicates their execution.

A news survey...

Vigil@nce informs you about news related to security.

This technological survey comprises three key aspects:

Synthetic information are available on a web server.

Email messages, daily or punctual, are sent depending on information gravity.

Users and topics are defined.
