

Have your products homologated against SESAM Vitale

In the field of French public health, in order to have your IT products marketed, it is necessary that you have them homologated against the SESAM Vitale requirement baselines:

- Terminal Reader Device requirement Baselines
 - Integrated Device requirement Baselines

In early 2001, SESAM Vitale GIE has officially licensed AQL's LECSI laboratory for the performance of tests for the homologation of Vitale Terminal Reader Devices.

AQL's LECSI licensing for the homologation of Integrated Devices is currently under progress.

Have your products and developments tested

Accreditation n° 1-0938
Laboratories Section
Scope communicated on request

AQL brings you its competence to:

- Perform acceptance testing for the benefit of industrial end-users.
- Compare products through testing (performance, functionality, security)
- Validate conformance to functional schedules of conditions.

With the support of an accredited laboratory

AQL's LECSI: an accredited laboratory

AQL's LECSI (*Laboratoire d'Essai de la Conformité des Systèmes d'Information* – i.e. Information Systems Conformance Testing Laboratory), accredited against ISO 17025 standard by the COFRAC, can associate with you in the domains of:

- Definition and specification of your testing campaigns,
- Assistance in the writing of validation, acceptance or homologation requirement baselines,
- Assistance in the implementation of validation or homologation processes,
- Performing tests (e.g. in order to earn SESAM Vitale homologation).

In order to carry out its duties, AQL's LECSI gets the support of Groupe Silicomp's specific competence in the domains of telecommunication networks, security, embedded systems and credit card applications.
